

MOBILE ID IN PARTNERSHIP WITH LAW ENFORCEMENT

The simple, secure way to verify identity

Mobile ID enables consumers to create a reusable, highly secure, personal online credential by authenticating themselves against their state's DMV driver record (System of Record).

Convenient

Your ID at your fingertips

Secure

Protected at every step

Private

Layers of trust

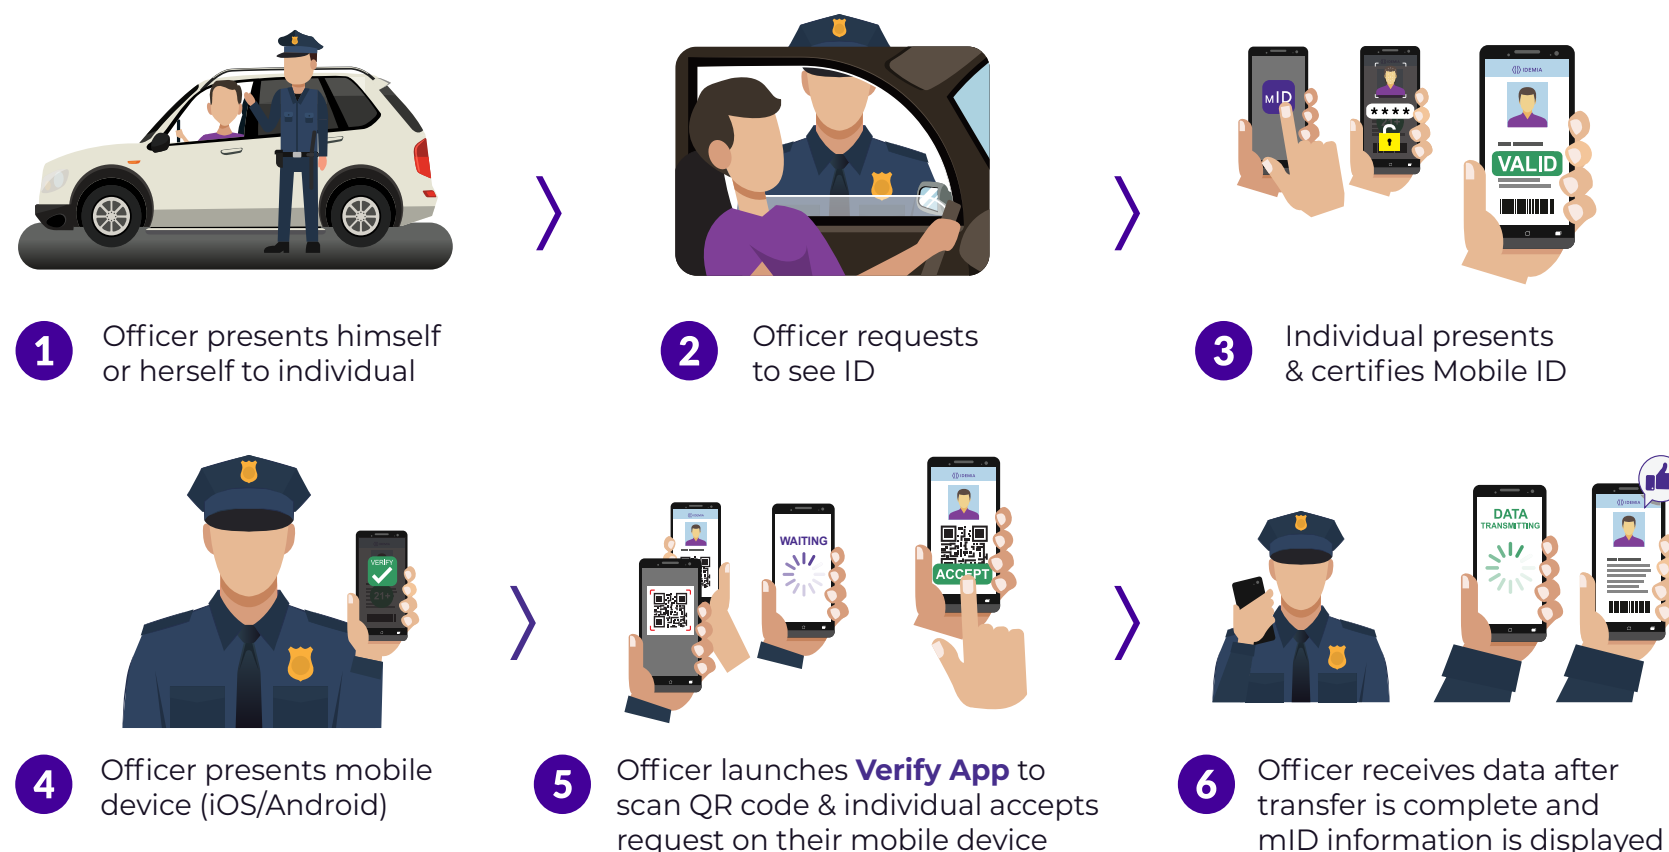

Introducing Mobile ID

- STEP 1** Individuals will download the Mobile ID Application from either the App Store or Google Play.
- STEP 2** Users will take a picture of the front and back of their license as well as capture a selfie. The license image will then be validated, and the selfie will be matched against the DL image.
- STEP 3** Mobile ID holders can present their digital ID by displaying the picture of the license on the device or by sharing their information via barcode or QR code.

IDEMIA is dedicated to providing tools to our Law Enforcement partners that will allow them to easily and safely accept Mobile ID.

Verifying Mobile ID

You can use the **Mobile ID Verify App** to quickly and securely authenticate a Mobile ID and view driver license information. Use the app to scan the ISO-standard QR code generated in the Mobile ID, and the relevant information is shared and displayed on your device. The ID holder's personal data is erased once the authentication is complete.

Why Mobile ID?

- Adds a contactless way to verify identity while taking significant steps to increase officer safety and protects the holder's personal information.
- Provides a new level of assurance of authentic documentation while increasing convenience for the holder.
- Contains embedded state certificate ensuring authenticity as well as passing more information than a PDF417.
