

## Remote WebTest

An on-demand, secure testing solution providing driver license applicants the flexibility to take their written driver knowledge test online, at home or at a 3rd-party testing location.

First-time driver license applicants are required to pass a written driver knowledge test and submit multiple forms of ID to be issued a learner's permit, typically requiring more than one visit to a DMV office. These lengthy transactions add to increased office wait times and congestion, impacting all in-office services. By leveraging highly scalable web hosting, testing services are securely delivered to any remote location, giving the applicant more control over the enrollment and application process.

All that's needed is a laptop or tablet with an internet connection. To use Remote WebTest, first-time driver applicants (or parent or guardian) must complete a secure self-enrollment and brief authentication process using jurisdiction provided credentials, or IDEMIA's Mobile ID, a mobile app that provides secure identity verification. After the test-taker's identity is verified through the process, the secure test is launched. Once the applicant passes the exam, they'll visit their local licensing office to present the required identification documents and obtain their learner's permit.

### Key Benefits

#### REDUCES DMV OFFICE TRAFFIC

Alleviates congestion and wait times by moving driver knowledge testing outside the DMV.

#### IMPROVES CUSTOMER SATISFACTION

Provides remote test-takers with flexibility and convenience, and frees up service availability for in-person services.

#### DRIVES OPERATIONAL SAVINGS

Leads to increased throughput in DMV offices, reducing need for staffing and in-office wait times, and allowing the DMV direct more resources to customer-focused activities that can only be addressed in-office.

# OTHER TESTING SOLUTIONS

## AUTO TEST

An automated driver's license knowledge test conducted at DMV offices on kiosks or workstations. AutoTest features advanced interactive multi-media content and multi-language support, along with a robust set of antifraud features.

- Automated scoring immediately notifies applicants of pass/fail
- Examiners and administrators save time and operating costs
- Improves customer throughput and reduces potential for fraud

## ROAD TEST

Provides automated driving/road skills test scoring on a tablet for DMVs and authorized third-party testing agencies, replacing paper-based processes for all aspects of driving/road skills testing. Drivers are scored in real-time and receive an immediate pass/fail notification upon test completion.

- Examiner can establish and change driver routes before leaving the office.
- Test results, start/stop time, test duration, vehicle speeds, photos of driver, examiner, vehicle, and potential infractions retained and stored with strong encryption.
- Improves customer throughput and reduces potential for fraud.
