IDEMIA PUBLIC SECURITY

IDEMIA STORM LP-X

All-in-one latent print software.
Web-based application to encode latent prints,
submit searches, and compare prints.

IDEMIA STORM LP-X allows examiners to quickly and easily search latent prints against your state system and NGI.

IDEMIA STORM LP-X is a next generation, cloud-native, Software-as-a-Service (SaaS) system using the same revolutionary user interface as IDEMIA STORM ABIS®, providing a complete and easy-to-use method to submit latent print searches to your state ABIS and to the FBI's NGI database.

Featuring an intuitive, user-centric design that incorporates the principles of ACE-V and GYRO, examiners can create cases, import images, encode latent prints, submit searches, and compare search candidates.

STORM LP-X also allows examiners to import exemplar prints and conduct Case AFIS searches of latent prints against suspects and victims. The same encoding that was used for the state or NGI search can also be searched against suspect and elimination prints.

STORM LP-X is a perfect fit for agencies that are looking for an alternative to using a latent workstation from your state's ABIS vendor or using Universal Latent Workstation (ULW) software. Without relying on a dedicated latent workstation, examiners no longer need to transfer latent print images to a different PC.

A web-based, cloud solution, STORM LP-X can be accessed from a regular agency PC or even from an examiner's home or a crime scene. Every examiner in your Latent Print Unit can log onto the application at the same time and all submit latent print searches simultaneously.

Key Benefits

EFFICIENT

Designed by latent print examiners for examiners.

CASE AFIS

Conduct closed searches of suspects and victims to locate those hard-to-find latents.

ACCESSIBLE

Web-based application allows you to search and compare from anywhere.

INNOVATIVE

Continuous updates delivering the new features and security updates.

AFFORDABLE

Subscription pricing allows for predictable year-to-year budgeting.
