

ID2Issuance

A Cloud-native credential management system that is always up to date, accurate, and secure.

Managing citizens' personally identifiable information (PII) for the issuance of identity credentials should always use the strictest security protocols. In addition, Motor Vehicle Agencies need a solution that can address those needs quickly and efficiently. With ID2Issuance, Motor Vehicle Agencies can quickly validate residents' photo and signature, perform one-to-many (1:N) face and fingerprint biometric matching, and manage documents for driver licenses and/or ID cards—all while keeping citizens' PII safe, secure, and private. IDEMIA provides a fully functional Cloud-native issuance solution that brings together industry-leading matching algorithms to eliminate bias and speed up the user experience. Because it is run in the Cloud, the software is always up to date.

STREAMLINED ISSUANCE PROCESSING

Because it uses Amazon Web Services (AWS), the issuance application is exceedingly scalable and secure. No matter the state agency's issuance requirements, ID2Issuance will adapt to securely meet your jurisdiction's needs.

STREAMLINED COORDINATION WITH LAW ENFORCEMENT

Lineups – allows user to import an image and set parameters for a database image search to provide a potential lineup for law enforcement, eliminating user bias.

Watchlist – enables operator to store images of individuals wanted by law enforcement, so the system flags an applicant if their face is matched to an image on the watchlist, even if their biographic information is different.

Key Benefits

**SECURE, PRIVATE
PROCESSING**

FAST AND RELIABLE

EASY IMPLEMENTATION

ALWAYS UP TO DATE

LEADING CAPTURE AND MATCHING TECHNOLOGY

ID2Issuance utilizes IDEMIA's own industry-leading facial recognition algorithms, achieving accuracy of 99.93% in the largest datasets in NIST (National Institute of Standards and Technology) testing, and is among the top performing submissions in unbiased matching relative to race, gender, and age

INTUITIVE, ADAPTABLE, SCALABLE

The highly intuitive interface allows each user to customize their own views to improve operator experience to simplify validation. Allowing users to only display actionable information necessary for the task at hand reduces transaction times and improves customer experience.

EASY IMPLEMENTATION

The solution can easily be configured to meet any jurisdiction's unique requirements. With no dedicated hardware required, users can securely and conveniently connect through a web browser.
